

Online Experiments for Language Scientists

Lecture 5: Frequency learning

Kenny Smith

kenny.smith@ed.ac.uk

Heads-up about Assessment 1

- Due on 11th November
- Read the assignment brief
(<https://kennysmithed.github.io/oels2021/AssignmentBrief.pdf>)
- I'll set aside time for questions in next week's lecture
- No questions after 11am on Monday 8th November!

Ferdinand, Kirby & Smith (2019)

Ferdinand, V., Kirby, S., & Smith, K. (2019).
The cognitive roots of regularization in
language. *Cognition*, 184, 53-68.

Large frequency-learning experiment run on
MTurk

- Do domain (linguistic vs non-linguistic) and
demand (tracking 1 vs 6 frequency
distributions) influence **regularization
behaviour?**

Vanessa Ferdinand
(formerly Edinburgh,
now Melbourne)

Simon Kirby
(Edinburgh)

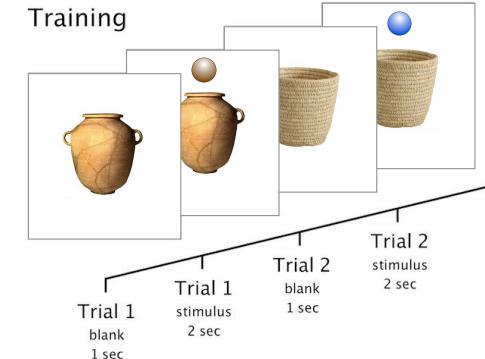

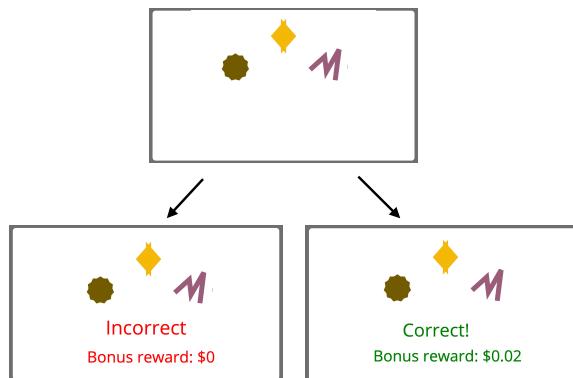

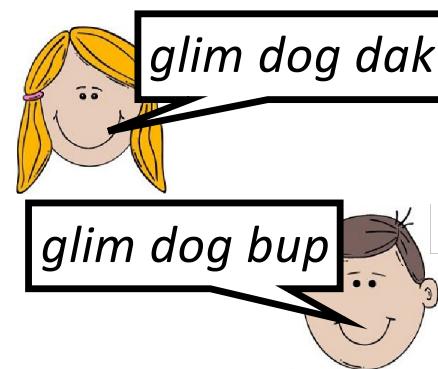

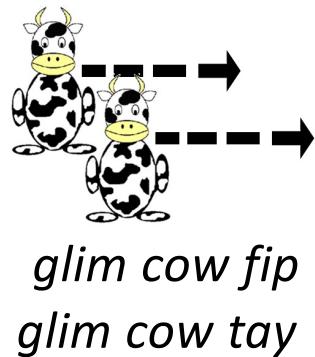

Variation in language

Languages exhibit variation at all levels (paraphrase, synonymy, allomorphy, allophony), but variation is **constrained**

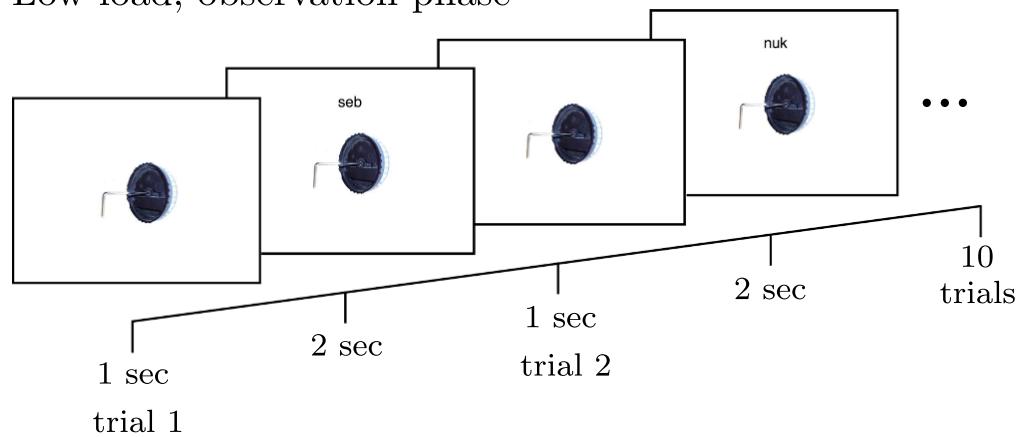

- Languages have lexicons and grammars
- Linguistic (phonological, lexical, syntactic, semantic) or sociolinguistic conditioning of alternation
 - English past tense allomorphy: hunt/**/d/** vs fish/**t/**
 - Noun classes: ***la chaise, le sofa, la fille, le garçon***
 - T-glottaling: glo/**t/**al vs glo/**?/**al

Why is language like this?

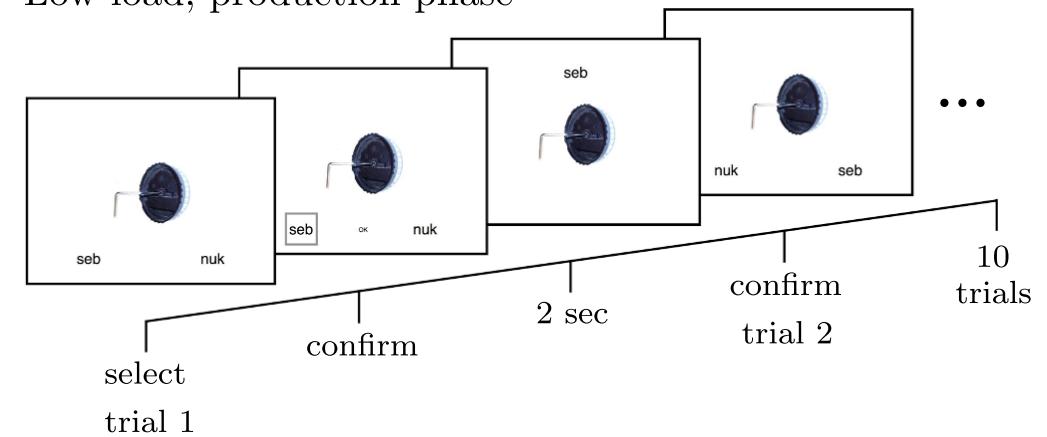

Variation-learning experiments

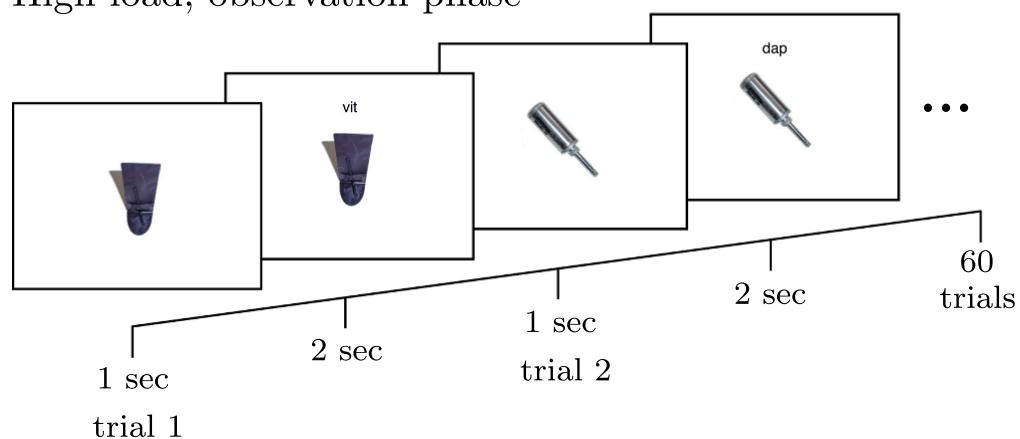

Low load, observation phase

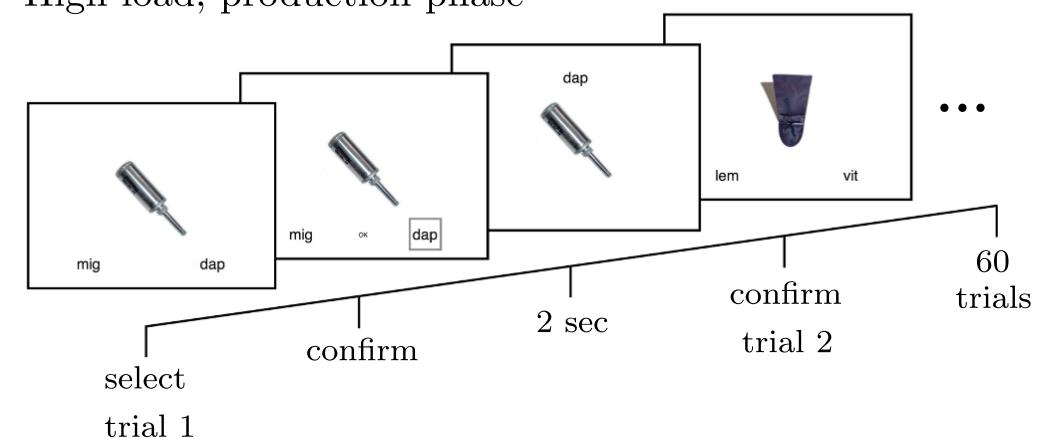

Low load, production phase

High load, observation phase

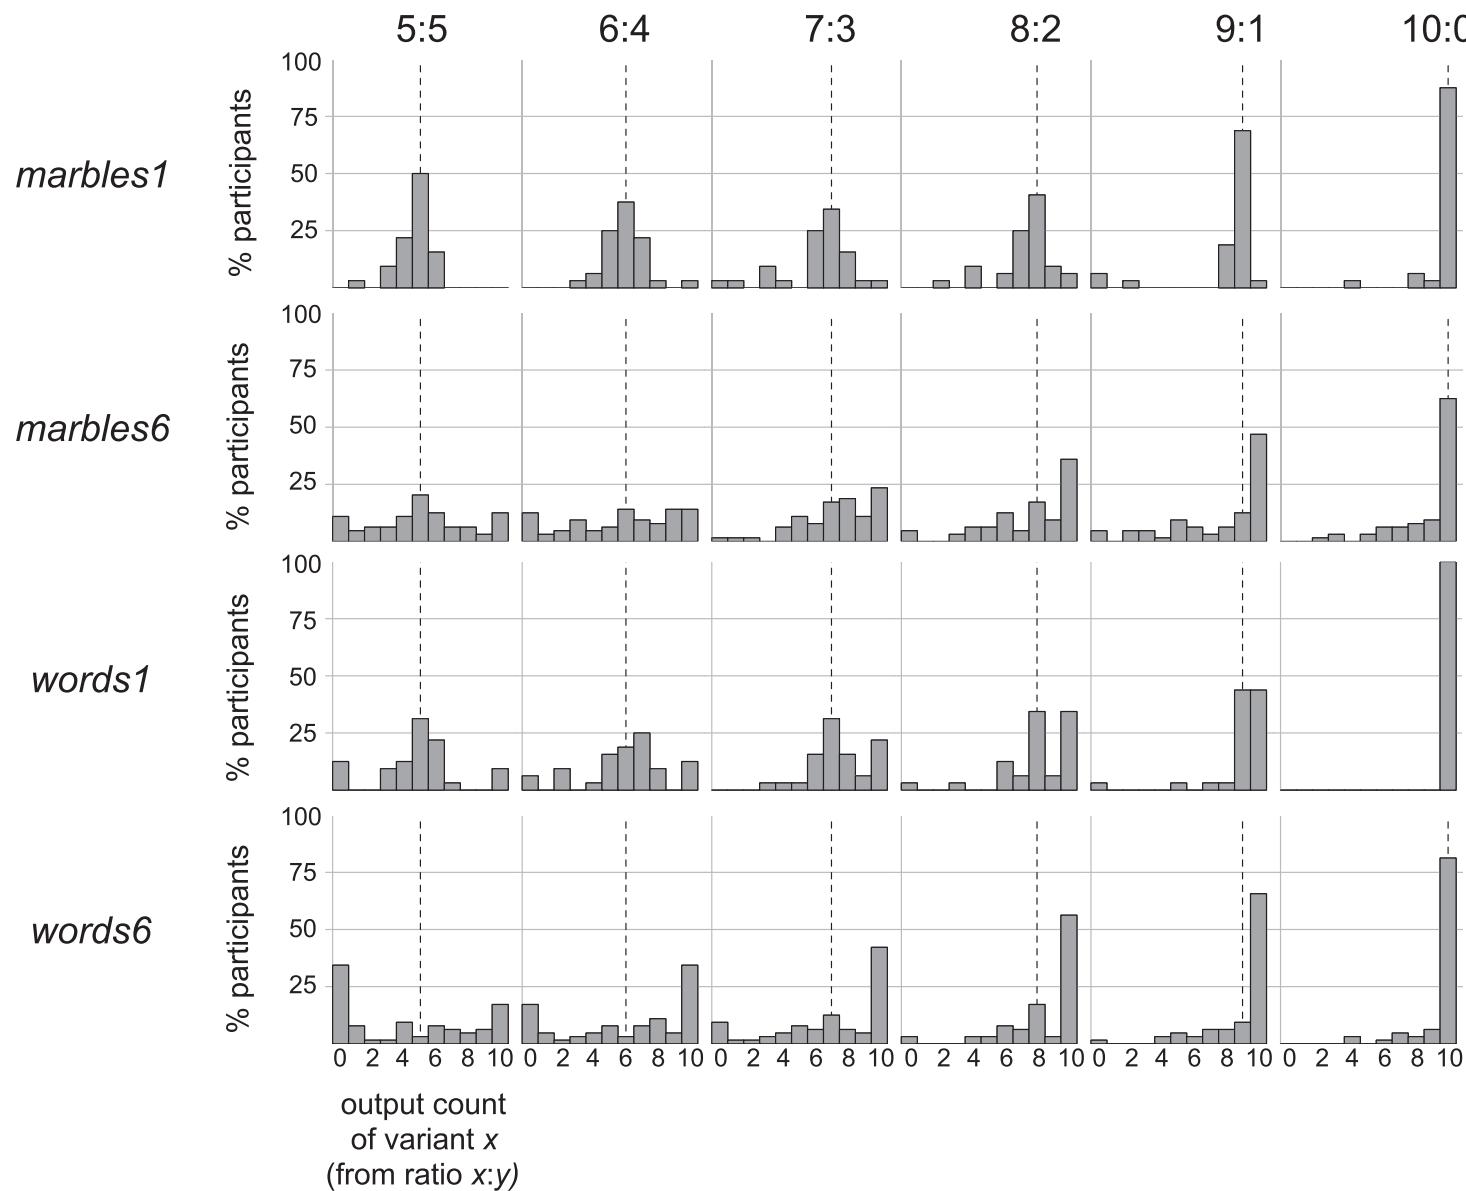

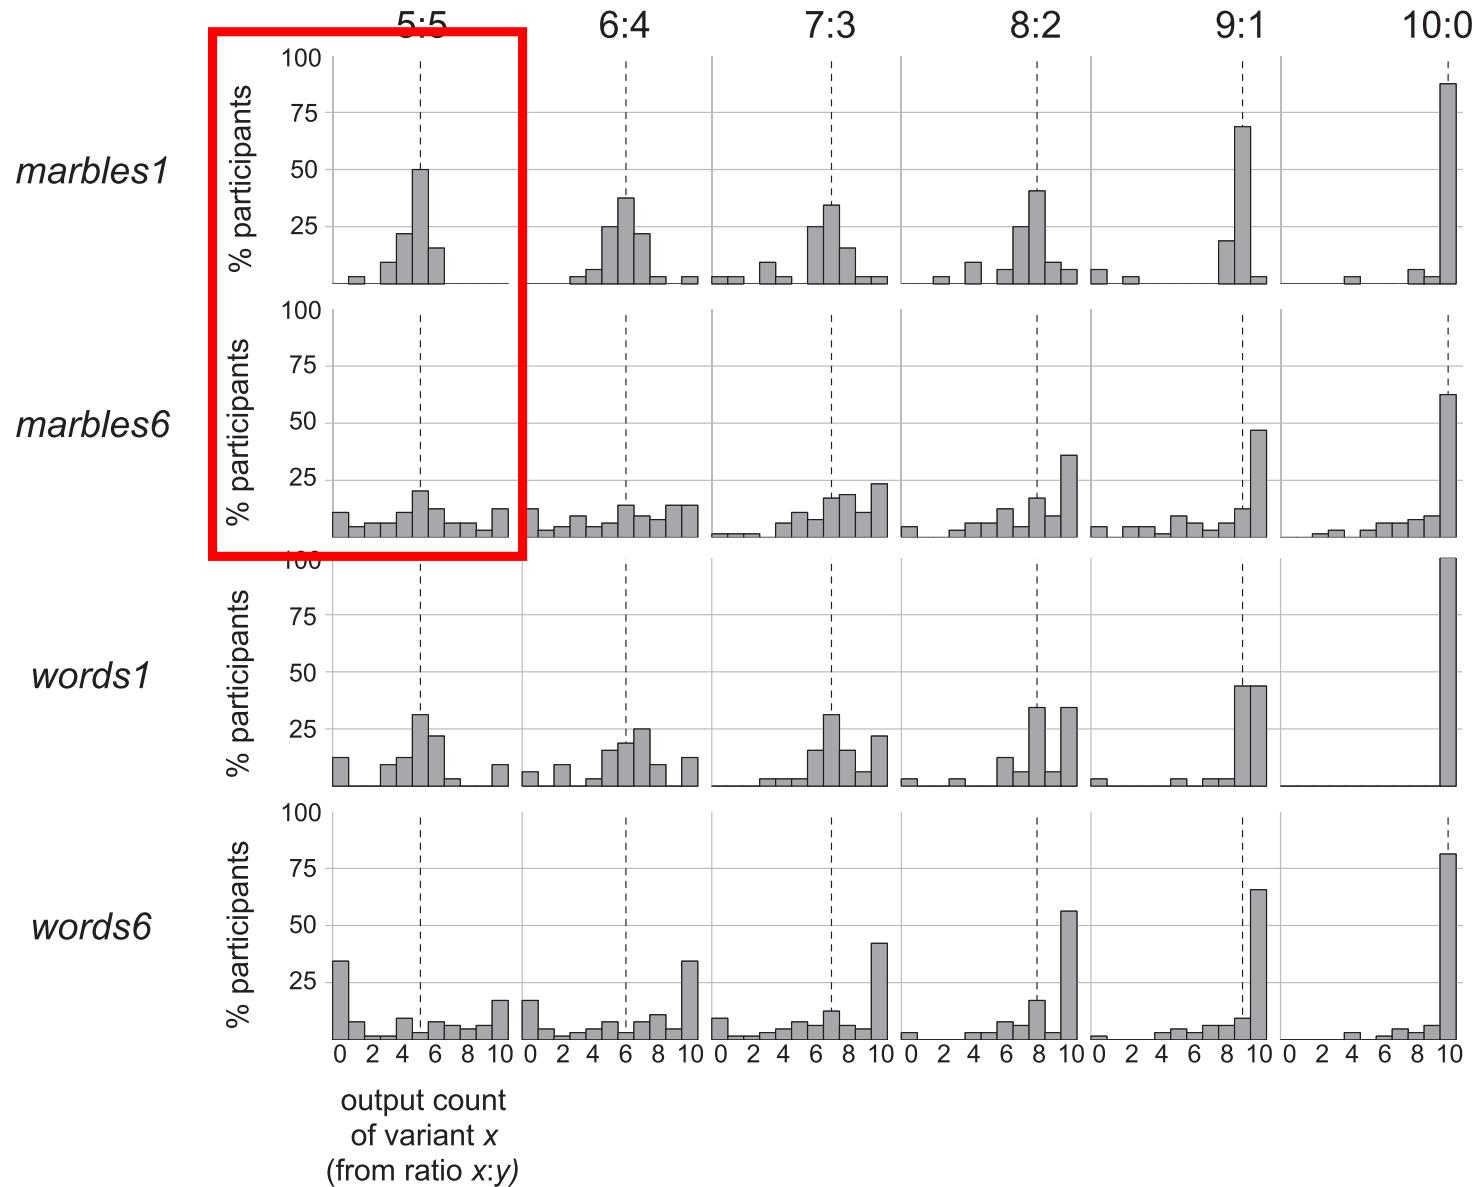

High load, production phase

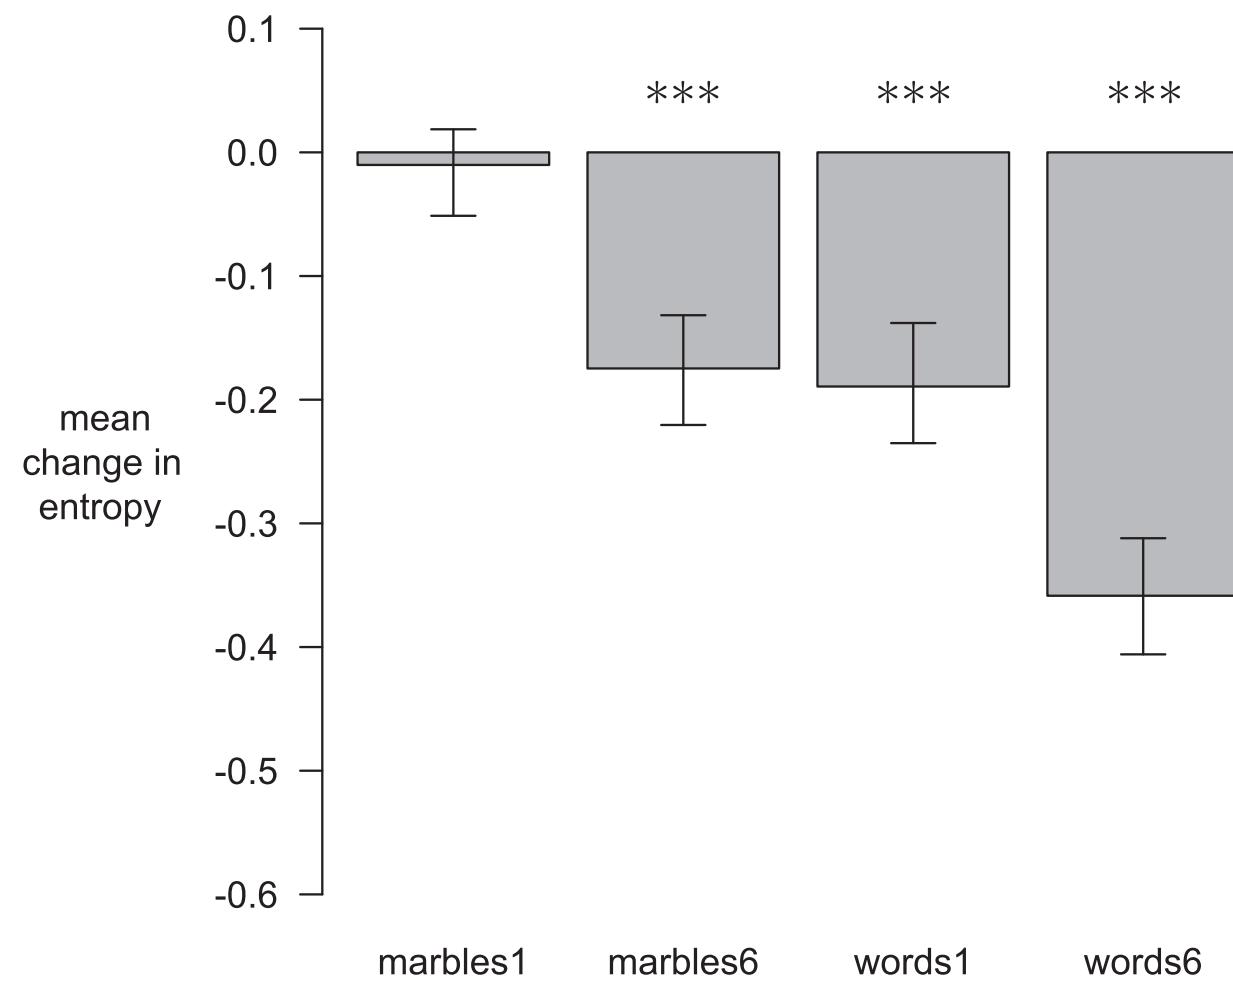

Sample size, study duration etc

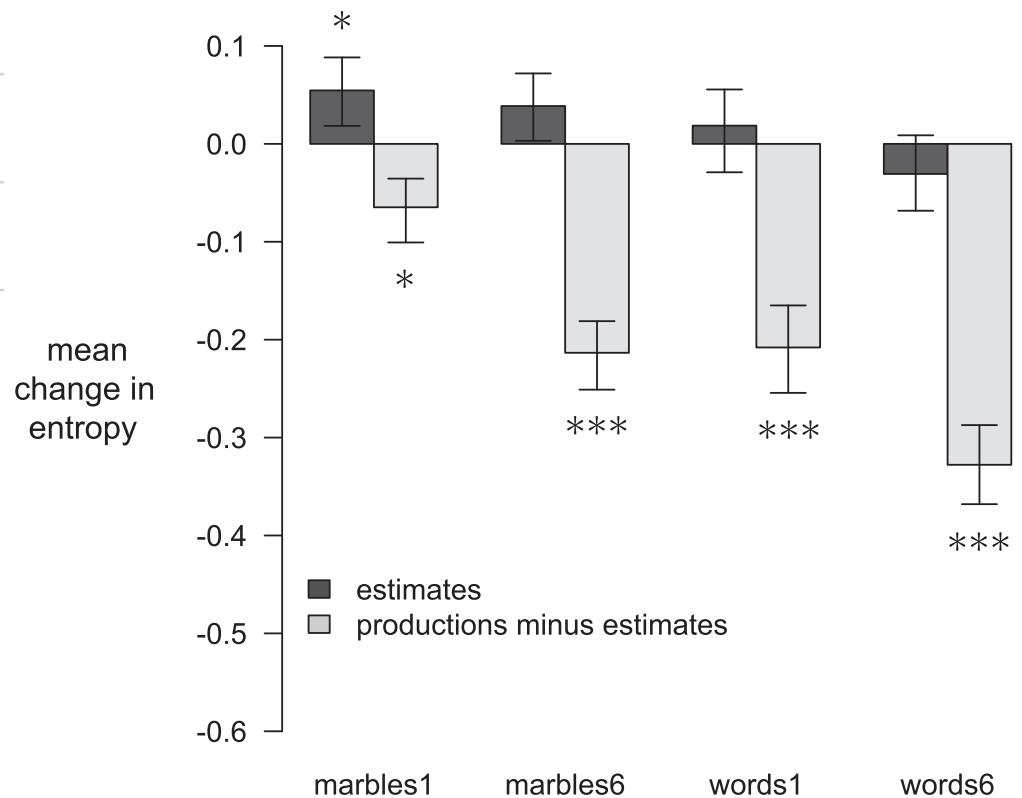

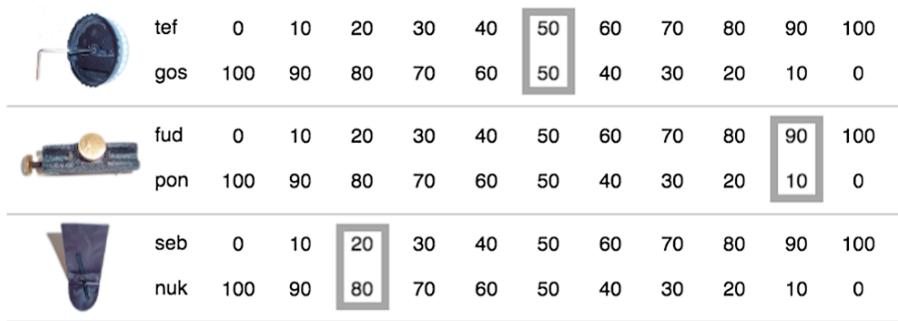

- US-based MTurk workers
- N=512 after exclusions
- 4 minutes (1-item task) or 11.5 minutes (6-item task)
- **\$0.10** (1-item task) or **\$0.60** (6-item task) 😞

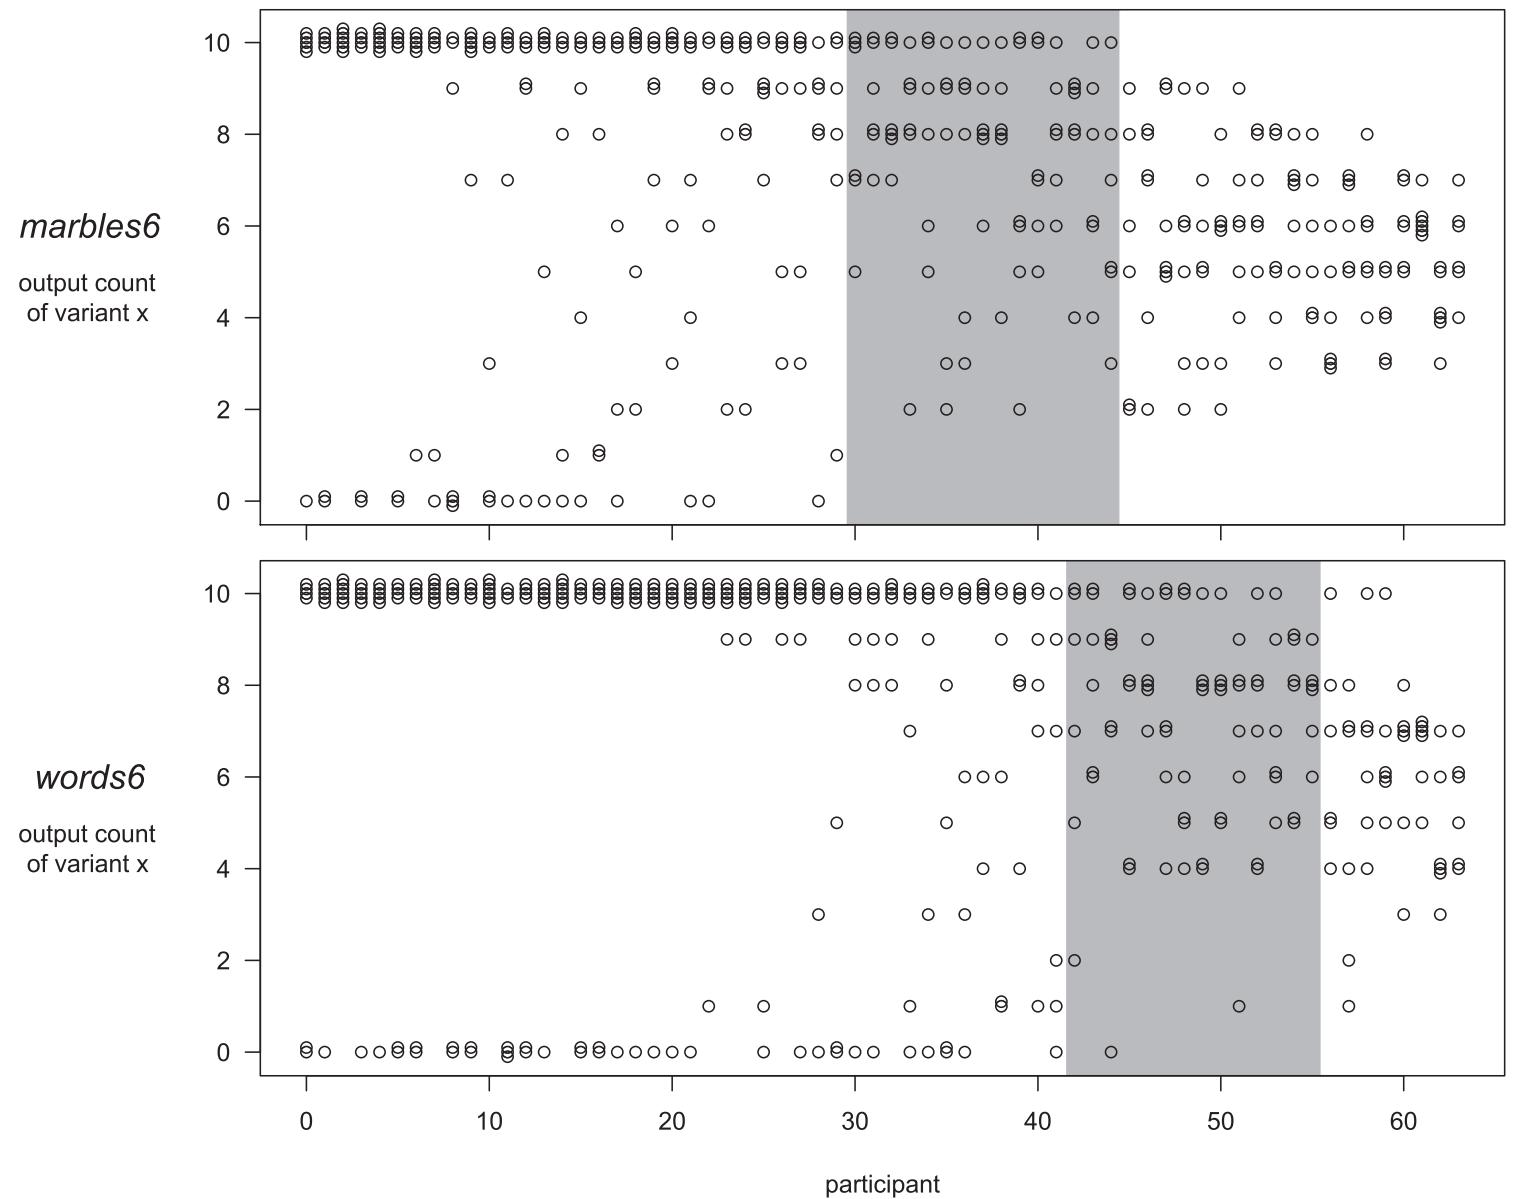

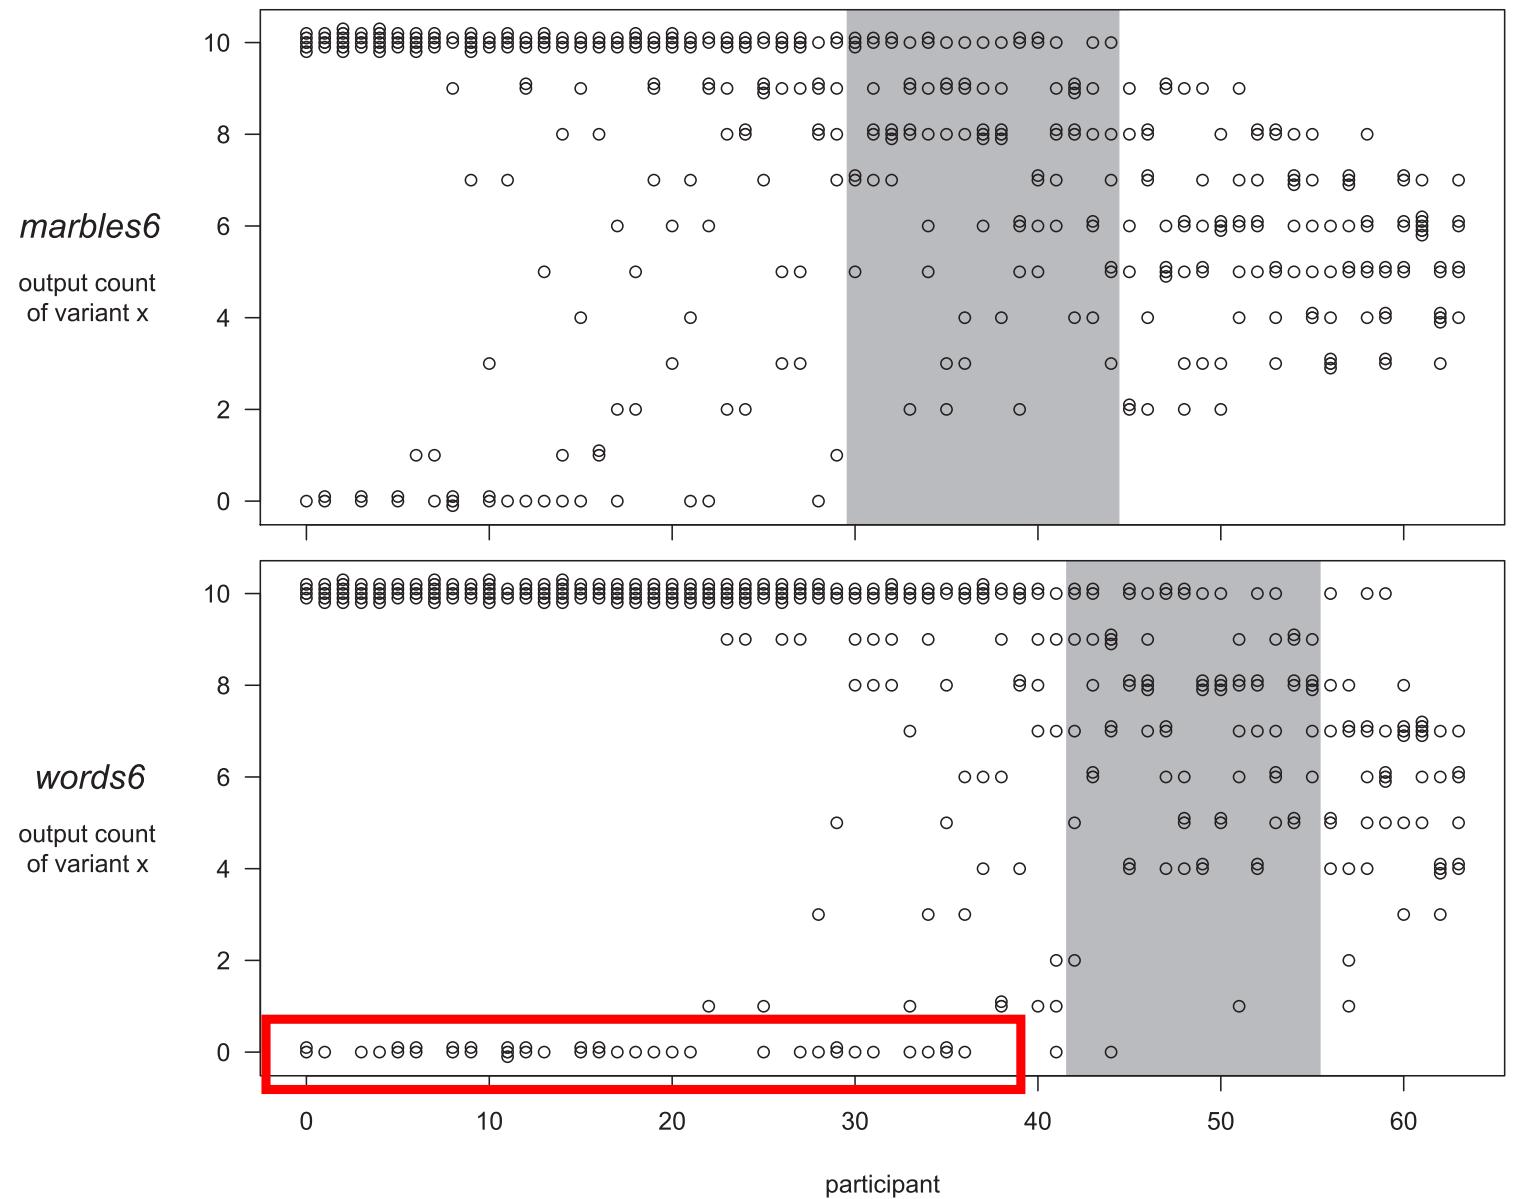

Regularization during encoding, or retrieval?

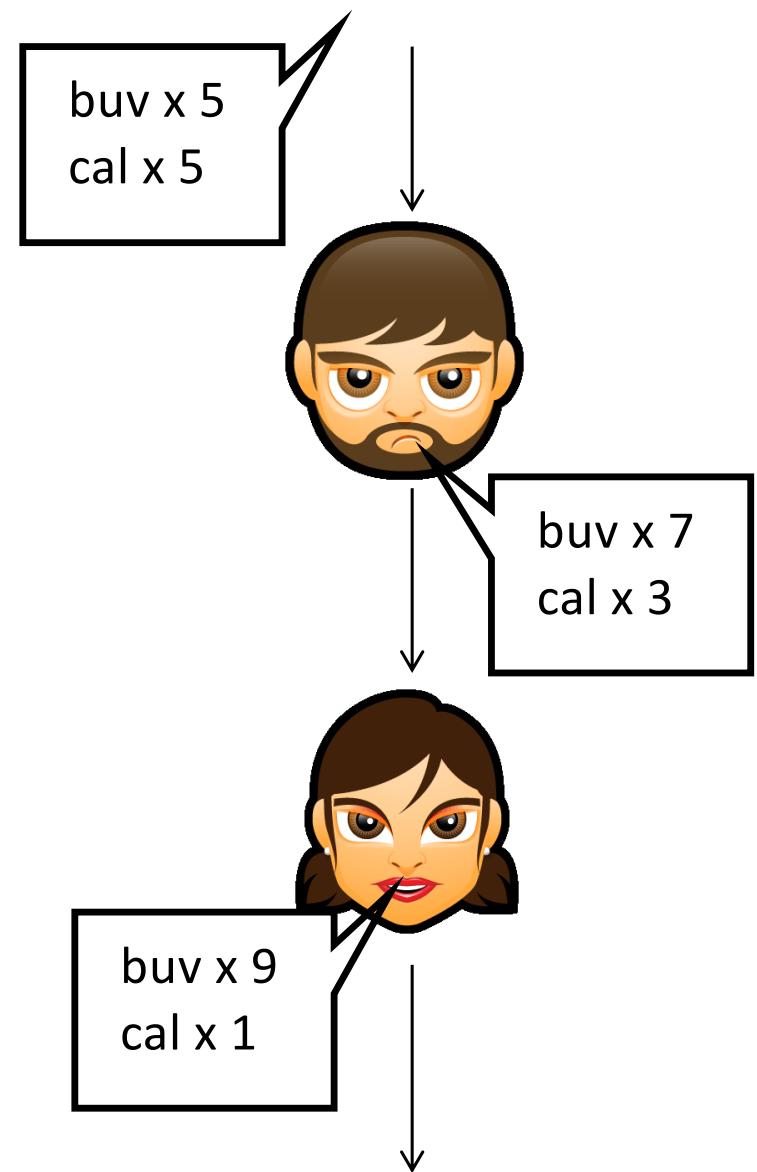

Individual differences

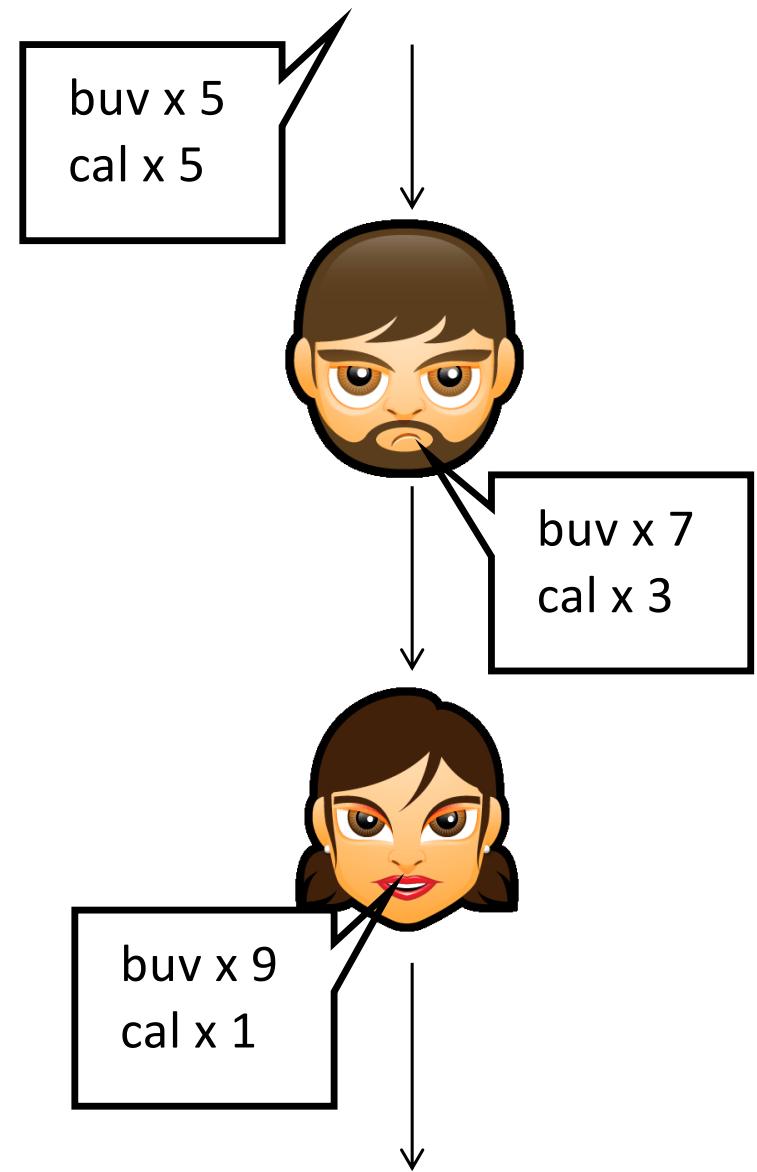

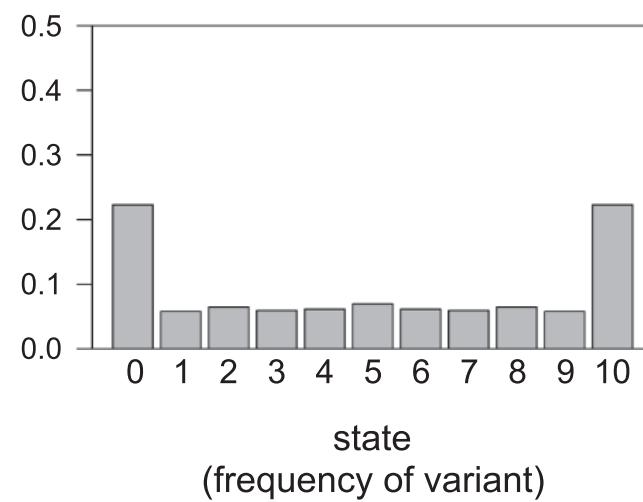

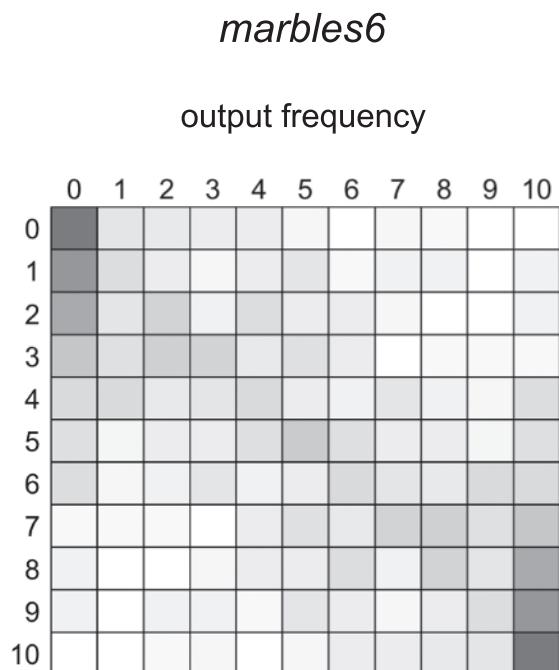

Minority regularizers

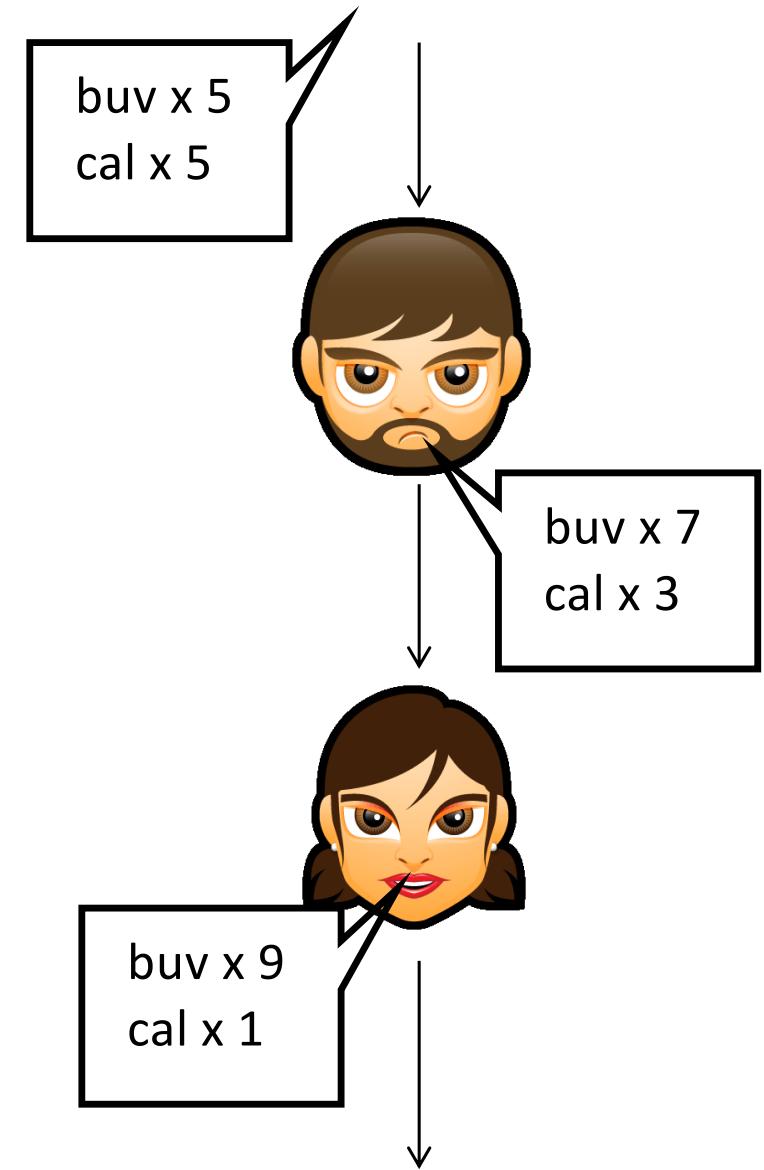

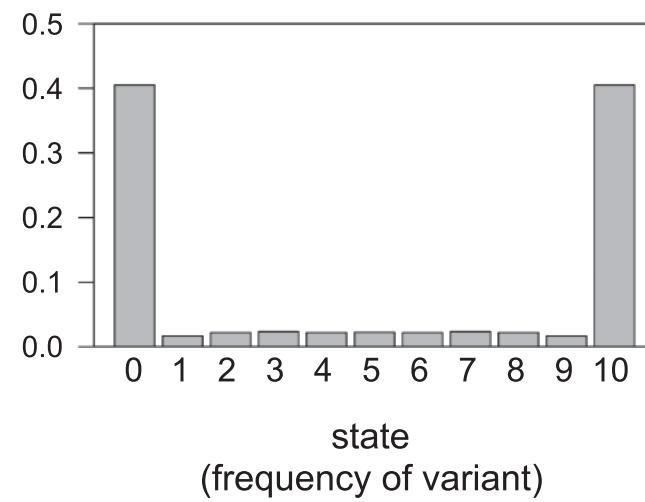

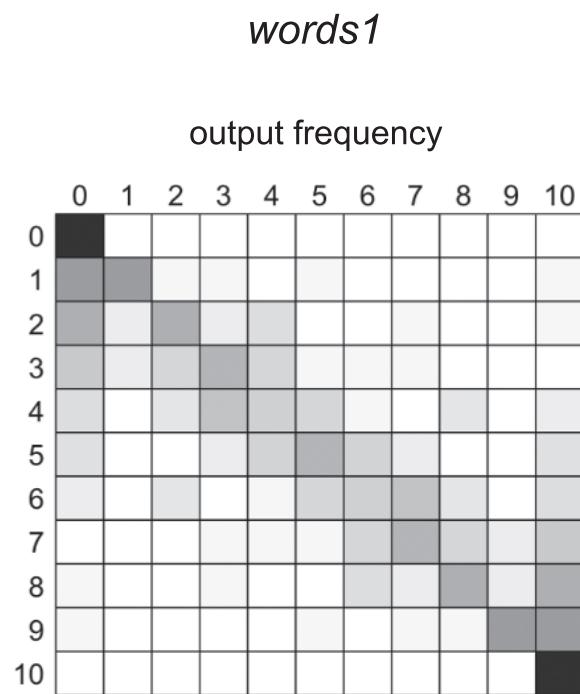

Simulating person-to-person transmission

Simulating person-to-person transmission

Simulating person-to-person transmission

Ferdinand et al.'s conclusions

Effects of domain and demand on regularization

- More regularization on linguistic than non-linguistic tasks (why?)
- More regularization when under greater cognitive load

Regularization effects mainly in recall (not encoding)

Simulation of transmission can reveal additional differences in regularization (cf. marbles6 vs words1)

Time for Q&A/discussion on this week's reading

Next up

Wednesday, 9am: lab on Gather

- A frequency learning experiment
- Quite a lot in this week's practical!

Next week:

- Perceptual learning, audio stimuli
